 TI - Memory card navigation instrument for vehicle on board navigation system
 AB - The vehicle navigation instrument is used in a satellite based navigation system or Global Positioning System (GPS). The instrument has reception and analysis circuitry which supports the system. It also has a memory in which map information can be stored. The memory unit has a replaceable, non-volatile solid state memory, preferably a re writable memory, with random access to the data. The data contains the map information. The memory is preferably a PROM or flash ROM and may be provided on a memory card.

 AB - DE19947481 NOVELTY - The vehicle navigation instrument is used in a satellite based navigation system or Global Positioning System (GPS). The instrument has reception and analysis circuitry which supports the system. It also has a memory in which map information can be stored. The memory unit has a replaceable, non-volatile solid state memory, preferably a re writable memory, with random access to the data. The data contains the map information. The memory is preferably a PROM or flash ROM and may be provided on a memory card.
 - USE - For on board vehicle navigation systems using GPS.
 - ADVANTAGE - The instrument can be easily integrated in a small space e.g. in a small vehicle and is highly reliable.
 - DESCRIPTION OF DRAWING(S) - The drawing shows a view of the instrument.
 - display 2
 - symbol 3
 - numbers 4
 - load speaker 5
 - operating elements 6
 - odometer 7
 - GPS receiver 8
 - memory card 9
 - insert slot 10
